### Making Monics Monitoring A Major Addition Is SingTel

**Integral Systems, Inc., (Nasdaq: ISYS) has announced that their wholly owned subsidiary SAT Corporation has been selected to provide its *Monics*® system to Singapore Telecommunications Limited (SingTel) for satellite monitoring, interference detection, and satellite operator planning capability.**

*Monics* is a state of the art monitoring system providing automatic monitoring of

**SingTel's** carriers using **SAT Corporation's** *Digital Signal Processing (DSP)* technology. Monics technology provides carrier monitoring and interference detection in a fraction of the time of a classic spectrum analyzer. In addition, Monics' unique algorithms automatically detect, characterize, and display interfering signals, and allow results to be viewed at any time. The Monics system will be installed at SingTel's **Seletar Satellite Earth Station** and can be expanded to multiple remote monitoring sites to monitor and detect interference and/or unauthorized users of the company's system payloads.
