Integral's Newpoint Swings The Compass For Norwegian Naval

Integral Systems Europe (ISE), a wholly-owned subsidiary of Integral Systems, Inc., (Nasdaq: ISYS) has been selected to provide advanced network monitoring and management systems to the Norwegian Navy's fleet of *NANSEN* class frigates and Netherlands Navy *NAVSAT* class frigates.

ISE entered into a three-year agreement with **Thales** and will provide the company's *Compass Network Management* solution for this contract as well as future yet to be disclosed projects. Compass is a product of **Newpoint Technologies**, a wholly-owned subsidiary of Integral Systems. Earlier this year, Thales was selected by the Norwegian and Netherlands Defense Procurement Divisions to increase the effectiveness of satellite communications for five of their *NANSEN* class Frigates and four *NAVSAT* frigates. Compass will be integrated into the Thales-provided SATCOM solution to centralize onboard equipment monitoring, giving SATCOM operators a complete overview of communication assets on each frigate.
